Anthropology takes culture as its central object of study. The discipline gives students a framework for viewing culture in the context of the natural world and evolutionary processes. Anthropologists also study the organization of social life, as well as symbolic and ideological systems. Major points of orientation are the search for cultural universals in the midst of wide variation in ways of life; the processes of change and alteration in social and cultural structures; comparisons between different societies; and the functioning of social, economic, and political institutions as part of overall cultural systems. Anthropology views the world of human culture as a natural laboratory in which diverse historical experiments have occurred and are occurring. The study of this diversity provides a foundation for a broad liberal education. The study of anthropology also contributes to the preparation of students for careers in education, medicine, business and industry, government service, and institutions in which a broad knowledge of human relations is important.
